There are few things that make such a large difference in life as new colours and patterns in our surroundings. For this reason, we want to make the job easier for everybody who paints, whether they are professionals or DIYers. We do this by taking the painters' tools very seriously.

Our production factory is in Bankeryd, in north-eastern Småland, Sweden. Here, we have manufactured paintbrushes for more than 70 years, and we have collected a large part of the Scandinavian expertise on painting tools here.

Our goal is for us to launch new and innovative products, which thanks to improved quality, function, ergonomics and design, make it easier for painters and decorators to get great results. To help us with this, we have professional painters and decorators assist with product development and testing – all the way from prototype to finished product.

A STRONG BRAND IN SUCCESSFUL COMPANY.

Anza and Anza Pro are part of Orkla House Care – one of Europe's largest producers of painting tools. Some of the industry's most popular and well-known brands are collected under this umbrella. All of them have a strong position on their own domestic markets: Anza and Anza Pro in Sweden, Jordan in Norway, Spekter in Denmark, as well as Harris and Hamilton in England. Orkla House Care is part of the Norwegian Orkla Group, which has Scandinavia's most extensive expertise when it comes to developing and retailing consumer brands. This makes Orkla House Care an even stronger partner for you.

WE TEST MORE THAN MOST

We are the market leader in Scandinavia for painting tools. And we know why: no other Nordic paint tool manufacturer has invested so consistently in innovation and development, for such a long time.

Our product development department is located right next to the factory in Bankeryd. This is where we not only perform careful quality inspections of our products – we also develop new brush mixtures, improved roller fabrics, handles that are more grip friendly and, sometimes, completely new painting tools here. Afterwards, we conduct all imaginable tests together with professional painters and decorators as well as paint manufacturers. Until we have something that meets our requirements for ergonomics, efficiency and end results. And, have a painting tool that's been approved by our product developers; yes, then it's ready for many long days in the hands of professionals and DIYers.

TWICE AS GOOD FOR PAINTERS AND DECORATORS

We care as much for DIYers as we do for professional painters and decorators. And, to ensure both groups get the help they need, one brand has become two – Anza for do-it-yourselfers and Anza Pro for professionals. Below, you can read more about how the brands differ and what they have in common.

ANZA

+

ANZA PRO

GUARANTEED UNIQUE PRODUCTS

That our products are genuinely unique in their performance and ergonomics is guaranteed by hundreds of registered design solutions and many patents.

ANZA PRO

WE KNOW WHAT IT TAKES

**A BRAND
FOR PROS**

The painting profession is one of the toughest jobs around. Which is why we work so hard for our place in the professional painters' toolbox. The aim is always the same: professional painters and decorators should get better results and be more efficient while reducing the strain on their body. We study their day, to find out how our job can make a difference for them. This knowledge influences the development of our paintbrushes, rollers and tools. When a painter says that one of our tools has the right feel, we know we have succeeded. And we know what's needed. Behind this feeling lies world-leading technology and development, ergonomic design, optimised performance and numerous tests.

A close-up photograph showing a person's hands working on a wooden surface. The hands are holding a wooden ruler and a pair of scissors, cutting through a roll of white paper. The background is slightly blurred, showing more of the wooden surface and the roll of paper.

ANZA

**WE HELP DO-IT-
YOURSELFERS
TO SUCCEED.**

A newly painted façade, new wallpaper on the walls or bare-foot friendly terrace? More and more DIYers are choosing to do their painting projects themselves. Anza wants every DIYer to obtain the best possible results, while we know that the road there can be both long and tricky; all you need to do is take a look at our mood-o-meter below. For this reason, we use our expertise to help and support as many as possible – all the way from the start to a really good finish. Of course, our painting tools play an important part – they have been developed to make painting easier. All of our years in the industry have given us plenty of practical knowledge about painting. We are happy to share this – as product tips, practical instructions on our website and store concepts to find the right products for each project.

PLATINUM PRO

SUPERIOR USER-EXPERIENCE

Platinum Pro are brushes for professional painters who demand absolute best quality and user-experience.

They have excellent paint pick-up and coverage capacity, which means that you save a lot of time. The synthetic filaments are of the highest quality, developed for precision painting, and are suitable for both water-based and oil-based paints, indoors and outdoors.

372302	300		64	21	1	7311490035506 

SOLID HOLD. The glue holds the brush insert solidly and prevents the loss of bristles.

RIGHT LENGTH. The bristle-length affects the paint pick-up capacity, provides the right user-experience, and spreads the paint evenly without leaving any streaks.

CAVITY. The cavity in the brush keeps paint as a reservoir. This enables the brush to pick up more paint and spread it over a larger surface.

SMART INSERT. The insert is made of cellular plastic, which does not swell and thus minimises the risk of the ferrule splitting and the brush losing bristles.

OWN BRUSH FORMULA. All Anza brushes have filaments that are specially produced for their specific task.

GROOVED SPIKES. The spikes that hold the ferrule are grooved so as not to loosen, and are of stainless steel. For small brushes (like this one), the ferrule is pressure-fastened.

IZA Elite PRO

ELITE PRO

A LOT OF BRUSH FOR YOUR MONEY

Elite Pro is a natural choice for the professional painter who wants to achieve really good results. One word summarises this series: “very.” Very high paint pick-up and coverage, to start with. Followed by very high-quality synthetic filaments that are suitable for both water-based and oil-based paints. The filaments also enable a very good finish and end-result. Simply great value for money.

TRADITION AND INNOVATION

Available now, Anza's first ergonomic brush for emulsion paint. The specially angled handle comes from our most grip-friendly facade brushes. The unique filament is durable and designed especially for emulsion paint.

BETTER FILAMENTS.

Thin and even coverage.
High paint pick up and release.

BETTER ERGONOMICS.

The handle is not just ergonomic.
The unique design reduces strain
on the body.

AS IT SHOULD FEEL.

Ergonomically designed handle for great
comfort and precision with each grip.

NUMBER
OF DIPS

TIME
REQUIRED

Anza's previous Emulsion brush	29	8:33
Anza's new Emulsion brush	22	6:49

TIME TO SAVE

The test was performed on 4 m² wooden
panel. The time required is after applying
the second layer.

EXTENDABLE.

Compatible with Anza extension
poles for better reach.

BASIC

THE SIMPLER CHOICE

Anza's Basic brushes are for more simple painting jobs. However, if you are going to paint a lot or place demands on the end-result, we recommend that you choose Elite or Platinum brushes, which are ergonomically shaped and have better filaments.

BASIC

BASIC XP FLAT BRUSH

Suitable for painting doors and woodwork. Plastic handle.

A SHORTCUT TO GREAT RESULTS

A new wallpaper gives color and life to the room and is of great importance for the overall impression. Our how-to guides and products help to do the job right and get a good result.

USING A ROLLER.

Anzas rollers applies the right amount of adhesive to ensure the wallpaper is fixed. Use with an extension pole for a more effective application, and to save your back and shoulders.

PAPERHANGING TOOL.

Use the paperhanging tool to remove air bubbles and to fix the wallpaper. The tool follows the surface and is gentle to the wallpaper.

PAPERHANGING KNIFE WITH HOLSTER.

It is important that the wallpaper gets sharp edges when you cut.

ROUGH SURFACES

PINK ROLLERS WITH LONG PILE

Our pink rollers are used to paint things like plastered facades, wooden facades, basement walls, outdoor walls and unplanned wood. Rollers for rough surfaces are recognisable by the long pile height, which enables coverage of rough and uneven surfaces.

WISTEX

ROLLER FRAMES

GRIP-FRIENDLY AND EXTENDABLE

The roller frame handles are oval so that they fit the hand perfectly. And using an extension pole spares your shoulders and back while also enabling you to reach longer – and save time. All of our frames are therefore extendable. The Platinum series is made of aluminium so that painting will be even lighter, while Elite is made of steel.

FRAMES

PLATINUM MAXI FRAME ALUMINIUM

Ultra-light frame in aluminium to make painting work extra easy. The handle is ergonomically designed with a comfortable rubberised grip. Fits Anza's extension poles.

CLEANING

CLEAN BEFORE, DURING AND AFTER

Everything is connected when it comes to painting. Good preparations give successful results. And good results can last longer with maintenance. With this in mind, Anza has developed a range of smart, efficient cleaning products. And thanks to a number of unique features, these products will give you the best possible results – before, during and after painting.

CLEANING

Art.no.	Width mm	Length mm	Qty/ pack	Bar code
